The IBM Personal Computer XT.
More power to the person.

Plenty of muscle.

That's what the new IBM Personal Computer XT means to a person with heavyweight data to manage.

Because one of the XT's many strong points is a 10-million-character fixed disk drive that helps give you the power to pump more productivity into your business.

What's so special about a fixed disk? Exactly that. It's *already* fixed inside the system, with the capacity to store the facts, figures, names and numbers you need to work with. (Rather than take the time to go from diskette to diskette, you can conveniently store up to 5,000 pages of text or up to 100,000 names and addresses in one place.)

Yet there's more built into the XT than its fixed disk. Reliability and quality are built in as well. Plus more than

30 years of IBM experience. A new level of price/performance. And a remarkable compatibility of both software *and* hardware with the original IBM Personal Computer.

So, with the introduction of the IBM Personal Computer XT comes a special tool that's designed to help you be more productive in high-volume applications.

Another tool for modern times to keep you going strong.

To find out where you can see the IBM Personal Computers, call 800-447-4700. In Alaska or Hawaii, 800-447-0890.

WHAT'S THE DIFFERENCE?

IBM Personal Computer

IBM Personal Computer XT

BASE SYSTEM*	BASE SYSTEM*
User Memory	User Memory
64KB (expandable to 640KB)	128KB (expandable to 640KB)
Auxiliary Memory	Auxiliary Memory
Up to two 5¼" 160KB/180KB or 320KB/360KB diskette drives	One 10 megabyte fixed disk drive and one 5¼" 360KB diskette drive standard
optional	

*An expansion unit can also be added to both 16-bit (8088) systems for remote system expansion slots. Added to the IBM Personal Computer, it can house two 10 megabyte fixed disk drives. Added to the IBM Personal Computer XT, it can house one additional fixed disk drive for a total of 20 megabytes.
