

Evaluating Word-Processing Programs

A 100-point checklist simplifies the decision-making process

by Arthur Naiman

How to Keep Score

In the case of all yes/no questions, yes is the answer that earns the points.

When keystrokes are being counted, control characters count as a stroke and a half. So do shifted characters. Shifted control characters—or any other combination of three keys you have to hold down at once—count as two keystrokes. If a program can't do the function at all, it gets a five-keystroke penalty.

Count cursor arrows with auto-repeat for a minimum of 3 (it takes a while to get started) and a maximum of 10 (to move from the top to the bottom of the page or from one end of a line to the other).

If a question asks, "Is there a one-stroke command to . . .," count control characters (but not shifted control characters or other three-key commands) as one stroke.

Since some microcomputer keyboards have special function keys like those on dedicated word processors, and since certain word-processing programs have been designed to work with them, such programs may get different scores, depending on the system they're used on. But for dedicated word processors (which always use the same hardware), and for word-processing programs that can't take advantage of special function keys, the score won't vary.

If a file name is required, assume it consists of eight characters. Be sure to include *every* keystroke—Return, Enter, etc. Remember that you can give partial points (for partial performance) on any item.

Since the checklist is so long, I've boldfaced certain key words throughout, to help you find particular items more quickly and easily.

Safety and error handling—10 points

How hard is it to **lose text**? (4)

Are there hard-to-avoid fatal error(s) that are likely to occur:

about 1% of the time? (–25)

about 2% of the time? (–50)

about 3% of the time? (–75)

How well are **errors documented**? (2)

How clear are the error messages? (1)

Is verification of **saves** automatic? (1)

Are backup copies automatic? (1)

Can you save to either disk, or switch disks without exiting the program? (1)

Subtotal for safety and error handling:

Documentation—18 points

Is the **training manual**:

well-organized? (3)

readable? (3)

complete? (1)

Is the **reference manual**:

complete? (3)

well-organized? (2)

understandable? (2)

Is there a good, complete **index**? (1)

Are the manuals **typeset**? (1)

If not, is the text proportionally spaced? (½)

Is the layout intelligent and the **design** graceful? (1)

Are there **special kinds of documentation**, other than manuals (like a

This article is reprinted by permission of McGraw-Hill Book Company from Word Processing Buyer's Guide by Arthur Naiman (New York: McGraw-Hill, 1983).

reference card, on-screen tutorial, training tape, etc.), that you find useful? (1)

Subtotal for documentation:

Ease of use and human engineering—18 points

Is the **workfile held in memory or on-and-off disk**?

(no score, but an important consideration)

How many keystrokes does it take to go through the following **sequence of 23 commands**? _____

- 1) open a new text file (don't count the characters in the file name itself);
- 2-4) center, boldface, and underline a title;
- 5) skip a line;
- 6) indent the next line of text 5 spaces;
- 7) indicate the end of that paragraph;
- 8) skip a line;
- 9) indent the next paragraph 5 spaces;
- 10) put a page break at the bottom of that paragraph;
- 11-14) reset the top, bottom, left, and right margins (just count the commands, not the numerical values);
- 15) order the file to be double-spaced (if single-spaced is the default), or vice versa (again, not counting the numerical values);
- 16) save the file;
- 17*) print it out;
- 18*) stop in the middle of printing out;
- 19) return to the text;
- 20) delete a word (5 characters and a space);
- 21) delete a line (60 characters or more);
- 22) save this new version of the file, keeping the old version for backup; and
- 23) begin printing out again at the top of the page.

[*Systems with virtual representation can skip these two steps (17-18), since it's just as likely that a mistake will get caught on the screen as in a printout.]

Fewer than 55 strokes—5 points

56-60 strokes—4½ points

61-65 strokes—4 points

66-70 strokes—3½ points

71-75 strokes—3 points

76-80 strokes—2½ points

81-85 strokes—2 points

86-90 strokes—1½ points

91-95 strokes—1 point

96-100 strokes—½ point

more than 100 strokes—no points

How **easy** is it to **remember commands** (thanks to mnemonics, cursor diamond, and other logical key placement, menus, logical command structure, reference card, key tops, dedicated keys, reconfigurable commands, etc.)? (3)

Is the main editing **menu suppressible**, or not normally on the screen with the text? (½)

Is there a way to know:

what **page** of the printout you're on? (½)

your **location** with respect to the entire file (what percentage of it is behind you, for example)? (¼)

Can you **find out the total size of the file** you're editing without exiting the program? (½)

Can you do that and return to where you were in the file in less than 3 keystrokes (or two control characters)? (¼ additional)

Can you **copy the program** as often as you need to? (2)

Total program size:

Less than 25K? (1) 25-35K? (½)

Or—on dedicated word processors, and other systems where the software and hardware are integrated—

Workspace more than 30K? (1)

Workspace more than 20K? (½)

Are the **editor and formatter** loaded **together**? (1)

If not, can you keep the workfile in RAM while switching from the editor to the formatter? (½)

How often does the **program** have to go to the disk to access **overlays**? (never, because whole program resides in memory—1; only goes to overlays occasionally, for special jobs—½; overlays are essential part of program—0)

Can you:

rename the file you're working on without abandoning the edit? (¼)

rename a file other than the one you're working on without leaving the program? (¼)

delete a file other than the one you're working on without leaving the program? (¼)

Can you get a **directory** of files on the disk without exiting the word-processing program? (—1 if not)

Does this directory also give you the size of each file? (½)

Can you ask for just part of the directory? (¼)

Is there a **type-ahead buffer (key-stroke storage)**? (1)

Will this program run **memory-mapped**? (½)

Subtotal for ease of use:

Editing power—25 points

What is the **total number of commands** this program offers you (for editing, formatting—everything)? [Count every possible option.]

more than 170—4 points

150-170—3½ points

130-149—3 points

110-129—2½ points

90-109—2 points

70-89—1½ points

50-69—1 point

30-49—½ point

fewer than 30—no points

Is there **wordwrap**? (1)

Ease and power of **basic** cursor movement, insertion and deletion **commands** (6)

[The next 16 questions will give you a reasonable score for this item for programs that use conventional techniques. For other programs, you have to make this judgment subjectively.]

Is there a one-stroke (or one-control-character) command to **move the cursor**:

right one character? (—1 if not)

left one character? (—1 if not)

up one line? (—1 if not)

down one line? (—1 if not)

(two-stroke or two-control-character commands count half for the next 11 questions)

forward one word? (½)

backward one word? (½)

to the end of the line? (½)

to the beginning of the line? (½)

to the top of the screen? (½)

to the bottom of the screen? (½)

to the beginning of the file? (½)

to the end of the file? (½)

Is there a one-stroke (or one-control-character) command to:

OVERALL SCORES	Version(s) (of software)	Operating system(s) and/or machine(s)	Price	Overall score	Safety and error handling	Documentation	Ease of use	Workfile in memory or on disk	Editing power	Formatting power	Responsiveness and support
CPT 8100	G-2	ded. word proc.	\$15,000	94¾	9	16¾	14¾	M	24	26¼	4

SCRIPSIT	2.0	TRS-80 Model II*	400	61½	2	14¼	7¾	D	18¼	16¼	3
MAGIC WAND	1.11	CP/M	400	61¼	3¼	12¾	8	M	17¼	20	0
EASYWRITER	1.0	IBM PC**	175	35	—24	14¼	11¼	M	12½	16¾	4

*Similar Scripsit program also available for Models I & III

**Very similar program called Easywriter Professional available for the Apple II

Table 1: Composite scores of some word processors.

delete a whole word? (½)
delete a whole line? (½)
switch between insert and write-over mode? (1)
either mode missing (—5)
Is there continuous and unlimited:
forward **scrolling**? (½)
backward scrolling? (½)
Can the **scrolling speed** be altered?
(¼)
Can you **call up any page** in the text
by number? (1¼)
Can you **move the cursor where** there
is **no text**? (½)
Can you:
copy **blocks of text**? (¾)
move blocks of text? (¼)
delete blocks of text? (1)
make a new file out of a block of
text without having to stop editing

the file you're working on? (½)
insert another file into the one
you're editing (½)
Can you:
find a string anywhere in a file? (1)
replace a string anywhere in a file?
(1)
search **backward** as well as for-
ward? (¼)
do many substitutions **all at once**,
without having to approve each
one? (1)
Can you **see each change** for ap-
proval if you want? (—2 if not)
In doing finds or substitutions, can
you tell this program to **ignore**
caps/lowercase? (½)
Look for **whole words only**? (½)
Can you:
make substitutions that affect more

than one file at a time? (½)
store stock phrases in memory and
insert them with a coded com-
mand while typing? (½)
Are there **other special global capa-**
bilities? (¼)
Is there a command that **moves** the
cursor to where it was before the last
command was executed? (¼)
Is there a **split-screen** feature? (1)
Can you **edit one file while printing**
out another? (1)
Are there **other special editing fea-**
tures that appeal to you? (1½)

Subtotal for editing power:

Formatting power—25* points
[*With virtual representation, pos-
sible total of 30]

Can you vary:

- the top and bottom **margins**? (—1 if you can't)
- the side margins? (—1 if you can't)
- character **spacing**? (1)
- line spacing? (1)
- the **tabs**? (1/2)

each tab setting individually? (1/2)

Are there decimal tabs? (1/2)

Are there automatic **indents**? (1/2)

outdents? (1/4)

Automatic **page numbering**? (1)

Can you choose:

- where on the page the page numbers go? (1/2)
- what text (if any) accompanies them? (1/4)

Can you get **headers** and **footers** printed automatically on each page? (1)

Are there special features like horizontal scrolling to help with formatting **extra-wide text** or **tables**? (1/2)

Will the program allow you to **bold-face** on printers that are capable of it? (3/4)

Is there **overstriking**? (1)

Are there **subscripts**? (1/4) **superscripts**? (1/4)

Can you **underline** continuously, i.e., under spaces and punctuation as well as letters and numbers? (1/2) (—1 if program can't underline at all)

Can you automatically **center** lines? (3/4)

Is there automatic **two-column print-out**? (1/2)

Do you have a choice of **single-page**

or **continuous** printout? (1)

Can you **link files** during printout, either by embedding a line at the end of each file or by specifying the files to be linked when you give the print command?

Either (1) Both (1 1/2)

Can you have **multiple copies** of the same file printed out with one command? (1/2)

Can you embed a command that makes the printout **stop and wait** for your instructions? (1/4)

Can you stop printout from the keyboard? (—2 if you can't)

Can you **print from** the **middle** of a file? (1)

Can you **justify** the **right margin**? (1)

Is there true **proportional spacing** on printers that allow for it? (2)

Is there **on-screen formatting**? (2)

(line breaks—1/2; page breaks—1/2; centering—1/2; other formatting information displayed—1/2)

[An extra 5 points is given for **virtual representation** (which is machine dependent). To qualify, the screen must display all of the following (partial points as indicated):

- full page (at least 54 lines) of text (1)
- underlining (1/2)
- double underlining (1/2)
- boldface (1)
- justified right margins (1)
- proportional spacing (1)

Is there automatic **hyphenation**? (1)

If not, are there conditional hyphens? (1/2)

Is there a **conditional page break** feature? (1)

Can you ask for a no-break space? (1/4)

Is there an **instant print** feature? (1/2)

Are there **other** special **formatting features** that appeal to you? (1 1/2)

Subtotal for formatting power:

Responsiveness and support—4 points

(Based on reputation, users' comments, what the vendor says, etc.)
